Can your NiTi file do this?

EXTRAORDINARY FLEXIBILITY – TF[®] files from SybronEndo are up to 70% more flexible than other rotary NiTi files.* The proven design of TF significantly reduces file breakage and allows you to work with greater efficiency and confidence.

FASTER AND EASIER – The TF sequence requires just 3 files for most cases. TF's variable pitch design and improved surface finish ensure fast, ideal canal shaping every time. **CONFIDENCE IN ENDODONTICS** – TF provides unsurpassed safety and ease of use.

For more information on TF, see page 4.

Rider Digital Apex Locator

Accurate Real-Time Feedback

Advanced digital technology enables the Rider to accurately and reliably pinpoint the working length in the range of .05 - 0.00mm in both wet and dry fields.

Versatility and Convenience

Depending on your preference and access needs, the Rider can be configured in 3 different ways:

- 1) Attached directly to the motor on a handpiece*
- 2) Attached to a file by the lead wire
- 3) Independent with a hand file

Weighing just 26 grams, the Rider provides real time visual and audio feedback that can be muted with a simple tilting motion.

Rider Digital Apex Locator Kit 972-0200

Contains: 1 Digital Apex Locator, 2 Apron Clasps, 1 Handpiece E-Type Adaptor, 1 Motor Strap 22-25, 1 Motor Strap 24-27, 1 Lead Wire Connector, 4 Lead Wires 75cm, 1 Extension Cable 50cm, 1 Disposable Sleeves pack, 1 Mini Probe, 2 Lip Hooks, 1 File Clip, 1 Battery, 1 Operating Manual.

DIAGNOSTICS

^{*}The Rider works when attached to most handpiece motors. Attach to file by lead wire in the event you are not getting a reading. Compatible with most E-type Connections. See product insert for list of compatible handpieces.

TF - Twisted Files

TF® is produced with SybronEndo's proprietary R-Phase™ Technology, resulting in NiTi files that are 70% more flexible and 2-3 times more resistant to cyclic fatigue than other rotary files.* This special technology also enables TF to maintain the natural anatomy of the canal better than other files. TF preserves dentin and adds to the longevity of the post-RCT tooth.

Simple 3 File Technique

Most brands of NiTi files require 5, 6 or even more files per case. Not TF from SybronEndo. The TF Technique is just 3 files per case, perfectly matched to the type of tooth you're treating – 1 set for anteriors, another for premolars and molars. By reducing the number of files to just 3, we've taken much of the complexity out of root canal therapy. TF makes file selection simple, straightforward and easy.

Fast and Efficient

A simpler technique means more than just ease of use. Since doctors typically use 3 TF files per case, fewer files per treatment translates into less inventory, lower file cost per procedure, more time savings, and ultimately more predictable RCT.

^{*}Data on file, Sybron Dental Specialties, Inc. Data from Gambarini G. Cyclic fatigue test and flexibility test.

SHAPE SYBRONENDO

K3 Nickel-Titanium Files*

K3™ is a third-generation, triple-fluted, asymmetric endodontic file system. Designed to cut quickly, efficiently and safely, with unparalleled debris removal, the K3 addresses technical and procedural issues that no other ground-fluted instrument does.

Variable Pitch

Many files maintain a constant pitch (distance between cutting edges) through the length of the file. This may cause a "screw-in" effect whereby each successive flute naturally follows the path created by the one before. The K3 file has a varied pitch that allows debris to effectively channel coronally. This is important not only during initial cleaning and shaping but also for retreatment.

Less Friction, More Support

With the recessed trailing edge of the radial land, K3 files minimize frictional resistance. Other nickel-titanium systems have wide radial lands that cause friction and can lead to breakage. K3 files have added mass behind the cutting surface to provide support and maintain integrity. With other systems, blade rollover or cracks can occur during instrumentation.

*Not available in all areas. Check with SybronEndo for availability.

LA Axxess Burs

Designed by Dr. L. Stephen Buchanan, the LA Axxess™ line angle instruments optimize your access preparations. Our new LA Axxess Diamond Bur, designed for use with high-speed handpieces, makes the job even easier. Non-cutting parabolic tips ensure perfectly cut line angle extensions without ledges or irregularities. These burs quickly, safely and accurately cut ideal filepaths through coronal tooth structure, reducing access time and minimizing the chances of file separation. In straight canals, our line angle instruments can be used to shape the coronal part of the canal in seconds. All the burs you need for initial access opening through restorations or crowns in one handy kit.

LA Axxess 2.0 Kit 815-1404

(Kit contains 2 of select burs)

TCM Endo III

The microprocessor-controlled Nouvag TCM Endo III is a slow-speed, electric torque-control motor capable of achieving fast and easy root canal preparation. Speed and maximum torque levels are preselectable and constantly controlled by the TCM Endo III control unit. The TCM Endo III is compatible with the TF and K3 instruments as well as most NiTi rotary systems. Handpiece sold separately.

EndoTouch TC

The EndoTouch™ TC is our first endodontic motor without a cord or foot pedal. Small, light, and powerful, the EndoTouch TC delivers 5 torque settings and 9 preset speeds, giving the clinician total control during instrumentation. Combined with TF or K3 rotary nickel-titanium files, it is the most advanced system available.

Features

- No cord or foot pedal
- Small, lightweight and comfortable
- Five torque settings
- Nine speed options available
- Auto-reverse
- Quick-charge battery

Endotouch TC 110v 815-9122 **Endotouch TC 220v** 815-9123

M4 Safety Handpiece

The watch-winding, oscillating movement of the M4 Safety® Handpiece keeps the instrument "floating" in the canal. The operator controls coronal and apical pressure, while the M4 smoothly and efficiently "glides" the endo instrument through the canal. That's the "safety" in the M4 Handpiece.

Axxess Handpieces

SybronEndo handpieces are compatible with all manufacturers' e-type couplings and are ideal for TF, K3, Quantec and other rotary files. The Axxess handpiece provides 5mm of additional clearance (when used with Axxess files such as K3) to ease work in tight posterior regions and will also accept standard rotary files. The 18:1 handpiece is perfect for rotary NiTi use and is available with a variety of heads.

18:1 Axxess Spring-Head Handpiece 815-9016 815-9010 18:1 Axxess Latch-Head Handpiece* 815-9008 18:1 Axxess Push-Button-Head Handpiece* 18:1 Replacement Axxess Spring Head* 815-9081

SYBRONENDO SHAPE

K-Flex Files

K-Flex® Files feature a unique rhomboid design, which provides a short axis for flexibility while maintaining cross-sectional strength. K-Flex is more flexible than conventional "K" files of comparable size, particularly in sizes #30 and above, which facilitates the negotiation of curved canals and their preparation with minimal potential for ledging and perforating.

21mm	25mm
17023	17017

Triple-Flex Files

Triple-Flex® Files are triangularbladed, stainless steel instruments designed for flexibilty with integrity. The twisted flutes allow aggressive cutting and debris removal you demand without sacrificing the instrument's inherent stability. Unlike round blades that have flutes ground in, Triple-Flex Files are highly breakage-resistant, even in the most stressful situations.

Hedstrom Files

Hedstrom Files are ground from stainless steel wire. The flute depth increases with the taper, creating a sharper, more flexible instrument.

SYBRONENDO SHAPE

Clean Shape

Sterile K-Flex and **Hedstrom Files**

SybronEndo now offers some of our most popular stainless steel hand files, K-Flex and Hedstrom, in new sterile packs. Our sterile handfiles will help doctors reduce preparation time, lower sterilization costs and ensure patient safety from contaminated files. Safe for your patients, convenient for you and perfect for all endodontic practitioners.

5.25% NaOCI

SmearClear

Photos (200x) show decimal tubules after instrumentation, a NaOCI soak and further 1-minute soak in the respective irrigant. Photos and study courtesy of Drs. J. Jantarat, K. Yanpiset and C. Harnirattisai.

Successful endodontic therapy demands a clean and clear root canal system. SmearClear's enhanced EDTA formulation addresses this issue by consistently removing the smear layer and leaving the dentinal tubules clear of organic matter. The practitioner will recognize an increase in the efficacy of adhesives as well as an assist in the 3-dimensional obturation of the root canal system.

Syringe (3) and Side-Vented Needle (30) Refill	973-1003

SlickGel ES

SlickGel™ ES is specially formulated water-based suspension to aid in the negotiation of root canals by endodontic instruments. Each MicroDose® polytube contains EDTA that chelates calcifications in the root canal system. Sodium hypochlorite irrigants react with SlickGel ES's urea peroxide to produce vigorous bubbling action that helps flush debris from the root canal system.

SlickGel ES pack 973-1015

12 MicroDose polytubes (1ml ea)

RealSeal 1 Bonded Obturator™ is the next generation in carrier-based delivery systems. All the components of RealSeal 1 – sealer, filler and core – are resin-based materials and bond with each other to form a superior seal. Creating a true chemical bond when these materials contact, this proven technology provides superior leakage prevention.¹ As an added benefit, this system's core is engineered to be easily discernable on a radiograph from the Resilon filling material that coats it.

An obturation system has one primary function – sealing the canal. RealSeal 1 creates a superior seal, preventing leakage and re-infection. In an independent blind study conducted at the University of Rome, the RealSeal 1 Obturation System resisted leakage 6 times better than GP obturation systems tested and nearly 10 times better than the Thermafil® system.*

1. "A Fluid Filtration Comparison of Gutta-Percha Versus Resilon: A New Soft Resin Obturation System." Stratton et al., U.S. Army Dental Activity, Fort Bragg, NC. Abstract: #0R20, J0E, Vol. 31(3), March 2005.

Soft-Core

Soft-Core's carrier is 30% thinner than Thermafil, allowing greater flexibility to navigate curved canals. A thinner core means more gutta percha for denser fills every time. And with just one universal taper size, you can greatly reduce and simplify your carrier inventory. Soft-Core is made with the most advanced Alpha Phase gutta percha available, ensuring excellent flow ability, adhesive qualities and superior sealing capabilities. In a recent university study, Soft-Core had 40% less microleakage than Thermafil.*

OBTURATION

RealSeal

RealSeal™ is an endodontic filling material with the familiar handling characteristics of gutta percha and the added vital benefits of a superior seal. Because RealSeal is applied in the same way as gutta percha, adapting it to your current system is as seamless as the seal it creates. Use the obturation technique of your choice, adding only a priming step before filling.

Features and Benefits

- Leak-Resistant. Unlike gutta percha, RealSeal leaves no gap for leakage. Coronal and apical leakage is substantially reduced.
- Technique-Compatible. Works with your current filling method.
- Retreatable. With solvent and/or heat. Like Grossman's formula, retreatments are easy.
- Radiopaque. Just like your current method of obturation, detection is not a problem.

System B Cordless

System B™ Cordless Fill Unit

Light weight and easy to use, the Fill unit accurately moves filling material apically to create a 3-dimensional fill. The ergonomic hand piece allows for controlled extrusion of either RealSeal™ or traditional gutta percha.

System B Cordless Pack Unit

The versatile Pack unit features 360° one touch activation that heats instantly for optimal safety, accessibility and control. The lightweight unit is perfect for single motion down pack and creating post space.

System B Cordless Charger

The charger unit provides maximum convenience. This two-battery charging station is compact and recharges the System B interchangeable batteries in just 2 hours.

.04 Plugger with Smaller Tip Improves Filling

The .04 plugger is 40% smaller which allows access into even the smallest canals. The .04 plugger fits both the original System B and the Elements Obturation

OBTURATION SYBRONENDO

System B Heat Source

SybronEndo is the industry leader in endodontic warm obturation techniques. The System B™ Heat Source provides clinicians with unequalled convenience, reliability, and accuracy. It allows you to dial in the exact temperature setting, which it maintains throughout the procedure. Simply set the temperature, and within 12 seconds, you have a superior apical seal and post space in a single motion. Backfill is just as easy. A sturdy castaluminum enclosure with carrying handle makes it easy to carry and place the System B wherever you want. The handpiece and cord assembly may be disconnected and autoclaved. With SybronEndo's rechargeable battery and charge adapter, you will get at least 1 hour of continuous operation. The System B also accepts SybronEndo's Touch 'n Heat tips.

Buchanan Heat Pluggers

These high-quality pluggers have a shape that closely matches the final root canal preparation, maximizing condensation forces on the softened obturation material without placing undue stress on the root canal system. Because the Elements Obturation Unit and the System B Heat Source provide an exact temperature throughout the procedure, the Buchanan Pluggers do not over-soften the obturation material, and the warm mass fills lateral canals as easy as it seals apically. When you disengage the heat, the pluggers cool almost instantly and separate easily from the condensed material.

Buchanan Hand Pluggers

Featuring both a tapered nickel-titanium end and a stainless steel end, Buchanan Hand Pluggers can be used in any common obturation technique, including warm and cold condensation. The pluggers are also

ideal for backfilling canals. Use the color-coded NiTi end for finishing off condensation procedures in even the most radically curved canals. Either end condenses and controls the movement of gutta percha under pressure. In addition, the Buchanan Hand Pluggers are fabricated of the highest grade materials for excellent durability and sterilization.

21

Touch 'n Heat 5004

Designed by Dr. Herb Schilder, the Touch 'n Heat™ conveniently and consistently puts the heat on for warm gutta percha techniques. The patented autoclavable tips are internally heated so that the heat is concentrated at the end where it's needed most. Not only do you have a precisely heated tip to work with, you also can control its temperature. Say "goodbye" to old Bunsen burners and step up to the Touch 'n Heat today.

Ultrasonic Tip Introductory Kit

SybronEndo's Starter Tip Kit is the perfect entry for those who recognize the benefits ultrasonics can provide for their office. Each kit contains one: SP-2, Scaler, CT-4 and Diamond-Coated CT-4.

Ultrasonic Tip Introductory Kit 973-1000

The "4" Series

The "4" series is geared for troughing around posts and opening calcified canals. SybronEndo recommends that the clinician begin at level one and increase according to personal comfort level.

UT-4	973-0039
SJ-4	973-0041
CT-4	973-0057

Spreader Tips

Longer than our "4" series, Spreader Tips are designed for troughing within the canal. Spreader Tips can trough around posts or break open a calcification, but also can be used to help retrieve separated files that are stuck in the apical third of the canal.

SP-1	Small Spreader Tip	973-0063
SP-2	Medium Spreader Tip	973-0065
SP-3	Ultra-Fine Spreader Tip	973-0067

BK-3 Tips

Our BK-3 surgical tips have three bends for easy access to any preparation, including MB2 canals. BK-3s provide excellent visibility and can finish an entire prep with one tip. Water is directed down the three bends and is able to reach the surgical site. BK-3s are for use with any application.

BK3-R	Upper Right/Lower Left Tip	973-0110
3K3-L	Upper Left/Lower Right Tip	973-0112

Specialty Tips

ST 973-0074

Scaler tip used to break away cement or calculus. The ST-1 is similar to the CT-4 except for its curvature for better access in difficult-to-reach areas within the tooth structure.

VT 973-0069

The vibrator tip is designed to vibrate a post out, vibrate a crown or bridge off or help seat a crown.

CK 973-0061

The Carr-Kanter Back-Action Ultrasonic Tip is used to reach tough areas such as MB2 canals.

CT-2 Main Right Tip 973-0053

Angled tip for use on upper right and lower left to complete the prep.

CT-3 Main Left Tip 973-0055

Angled tip for use on upper left and lower right to complete the prep.

File Adapter

The File Adaptor, used with NiTi blanks or K-Files (sizes 15-35) without a handle, can be inserted into the chuck. It activates irrigant in the canal, thereby increasing the effect of irrigation by acoustic streaming.

File Adapter 973-0031

RedStar Tips

RedStar Tips are innovative in ultrasonics. These tips provide a wide range of functionality and efficiency and are intended for use by both the novice clinician and the expert specialist. Developed in collaboration with Dr. Richard Mounce, these tips are designed with safety in mind first and will enable the clinician to handle various endodontic cases.

RedStar-1 Spreader Tip

- Helps remove cement around posts
- Opens calcified canals
- Removes isthmus tissue between canals

Redstar-1 Spreader Tip

973-1040

RedStar-2 Planing Tip

- Removes pulp stones smoothly and safely from pulp chamber without scoring
- Smooths the axial walls and floor of the pulp chamber
- Shaves thin layers of dentin without cutting too deep

Redstar-2 Planing Tip

973-1041
